

Xcam SLS

Thank You for your purchase of the new Xcam SLS. We strongly recommend that you go to <http://digitaldowsing.com/product/xcam-sls/> for complete instructions, continued support and updates.

The Xcam SLS is a complex experimental device in paranormal detection. It combines multiple methods of detection in a single contained device that is both hand held and mountable.

What is Xcam SLS?

SLS stands for 'Structured Light Sensor.' SLS is a scanning camera that will capture and understand the environment. This device is based around an advanced SLS as well as additional sensor inputs.

All of the data is gathered and displayed in real time. The connected PC based tablet gathers all the data into one central program for simple viewing and recording. One single screen shows all your data: Temperature, Imaging, Audio Range, Distance, Light Levels and Visualized Object Scanning.

FOR MORE INFORMATION AND DETAILED USAGE- Please follow our Xcam SLS page (www.digitaldowsing.com). There you can take full advantage of new features and news about the Xcam SLS.

For best results, use the Xcam SLS tablet exclusively for the Xcam SLS system. Installing additional software may cause conflicts!

If you have questions, know that we strive to answer all emails in 24 hours or less, Monday-Friday.

Best Regards,
Bill Chappell

*Installing additional programs can cause problems with your Xcam SLS and is not recommended.
We offer a One Year Limited Warranty on parts.*

Xcam SLS Quick Start Guide

Setting up the Xcam SLS

1. Charge your unit by *carefully* plugging in the enclosed charging cable into the Micro-USB connector.
2. Turn on the tablet.
3. The tablet will require you to activate Windows, just like any store bought device.
4. After your unit is charged, disconnect the charging cable.
5. Carefully connect the Camera Cable to the Micro-USB connector on the tablet.

Be Careful! *The Mirco-USB is delicate. Be gentle with your Xcam SLS.*

Turning on your Xcam SLS

1. Turn on the tablet.
2. Carefully, attach the Camera Cord to the Micro-USB Connector on the tablet.
3. From the Start Menu, swipe down and access the desktop. On the desktop click the Xcam SLS icon to start the program.
4. The program will take 15 seconds or so to load. You will see a black screen until then.

Video Capture - tap once and wait for the countdown to turn video capture on. Everything within the green brackets will record even if you open another program on top. The Video files are stored on the tablet for easy retrieval.

NOTE: *You cannot watch video you have captured while SLS is running.*

Capture Screen -tap to enable/disable screenshots. You can use the slider to adjust the interval.

Turning off your Xcam SLS

1. Turning off the tablet will turn off the Xcam SLS.
2. Do not put the tablet to sleep. If you put the tablet to sleep, the camera will remain on.
3. Wait a few moments to be sure the red light on the bottom of the unit turns off.

For best results fully charge your Xcam SLS!

Installing the Hand Grip

The handle will screw in clockwise.

For best results, tighten the hand grip with the grip 45 degrees from final placement. Once the hand grip is firmly attached, turning the hand grip 45 degrees to the center. This will firmly connect the hand grip without breaking the device.

*Installing additional programs can cause problems with your Xcam SLS and is not recommended.
We offer a One Year Limited Warranty on parts.*
